**Teri Willey**, VP, Technology & Business Devel., Mount Sinai School of Medicine

Alexandria Center for Life Science, New York City's first premier life science park, with state-of-the-art lab and research facilities, is designed to foster unique and innovative collaboration among New York's world-renowned academic and medical institutions, preeminent scientific talent, top-tier investment capital, and the broad and diverse commercial life science industry. New York Pharma Forum has organized a special program with the Alexandria Center to explore research collaboration opportunities with NYC's leading academic medical centers/research institutions. At this program, senior researchers and key stakeholders in the NYC life science community, including representatives involved in technology transfer, neuroscience research, clinical research, pharmaceutical partnerships and startups, will present case studies and collaboration opportunities and discuss how biopharma companies can take advantage of them. The program will also highlight the New York Genome Center, which leverages the collaborative resources of leading academic medical centers and commercial organizations to strengthen NYC's global leadership in genomics. Join us in this beautiful new complex with a magnificent view of the East River – it will be a wonderful networking opportunity as well as an informative presentation.
